SKILLS

FRONT-END TECHNOLOGIES

- JAVASCRIPT
- TYPESCRIPT
- REACT
- NEXT.JS
- VUE.JS
- HTML5
- CSS3
- SASS
- BEM
- BOOTSTRAP
- TAILWIND CSS
- REDUX
- MOBX
- ZUSTAND
- I18NEXT
- STORYBOOK
- ZOD
- REST API
- JWT
- WEBSOCKET

TESTING

- JEST
- REACT TESTING LIBRARY

DEV TOOLS & COLLABORATION

- NX
- GIT
- BITBUCKET
- FIGMA
- JIRA
- KANBAN
- SCRUM

VIACHESLAV MATVIEIEV

FRONTEND ENGINEER

PROFILE

Frontend Engineer with over 2 years building web apps across sports, fintech, IoT, and e-commerce. Shipped features as sole frontend developer on real-time streaming systems; contributed to enterprise-scale component libraries serving major UK clients. Comfortable owning work end-to-end - from architecture decisions to deployment. Looking for remote contract or short-term roles with US/EU product teams.

WORK EXPERIENCE

SOFTWARE ENGINEER — GLOBALLOGIC AUGUST 2023 – AUGUST 2025

- UK MAJOR SPORTS CLUB

- Worked as part of a 30+ person international Agile team maintaining and extending a suite of applications for a major UK sports club
- Contributed 20+ reusable components to the internal Storybook library, used across 3 production applications
- Replaced 6 third-party UI components with custom React implementations, improving Lighthouse score by ~15 points and eliminating ~200KB from the production bundle
- Implemented REST API integrations across the application suite, handling data transformation and normalization for centralized state management
- Resolved a critical auth flow bug on a legacy iOS version - traced an endless redirect loop and incorrect token handling, restoring login functionality for all affected users
- Promoted mid-engagement to carry frontend on a new product division - bootstrapped a Next.js app from zero to demo in 4 weeks, including Jest/RTL testing infrastructure, SSR/SSG architecture, and a product-specific design token framework

- UKRAINIAN VIDEO & TELEMETRY STREAMING APPLICATION

- Sole developer (frontend + tooling) on an internal IoT dashboard - owned the full lifecycle from architecture design to remote deployment via SSH, delivering in 3 weeks
- Built a real-time telemetry visualization interface in React, consuming live data streams with sub-second latency
- Developed a Python data emulator from scratch to generate and transmit telemetry signals, enabling frontend development and testing without physical hardware at early stage
- Implemented HLS video streaming alongside the telemetry dashboard, delivering a unified real-time monitoring interface

ARTIFICIAL INTELLIGENCE

EDUCATION

SEPTEMBER 2020 – JUNE 2024

BACHELOR'S DEGREE IN
COMPUTER ENGINEERING

PETRO MOHYLA BLACK SEA
NATIONAL UNIVERSITY

- US FUND SERVICE

- Delivered new features and legacy improvements across a multi-app fintech platform serving US-based financial services clients, working across both modern React and jQuery codebases
- Wrote comprehensive Jest test coverage for existing functionality, improving codebase stability ahead of new feature rollout
- Integrated backend API endpoints to enable feature coordination across multiple client-facing applications, collaborating directly with backend developers

FRONTEND ENGINEER — WHITETECH

JULY 2025 – OCTOBER 2025

- WEB APPLICATION BUILDER PLATFORM

- Joined a no-code web application builder platform at pre-MVP stage - contributed 10+ UI components to the React/Next.js (SSR) codebase and integrated them into the Storybook library with Jest test coverage
- Improved overall product quality by systematically resolving visual, logical, cross-browser, and accessibility issues inherited from the prototyping phase
- Reassigned prior to MVP release to a higher-priority production project - a recognition of capacity and reliability rather than a project end

- DIGITAL KEY MARKETPLACE

- Sole frontend developer on a major new feature - a real-time messaging system for customers and sellers built with Vue 3 and WebSocket
- Integrated the messenger seamlessly into a legacy JavaScript/jQuery/PHP codebase with no disruption to existing functionality
- Managed a complex local development environment independently using Ubuntu VM with Docker
- Delivered end-to-end within a 3-week deadline
